

Parameter setting system ifm electronic QA0011

The Parameter setting system LINERECORDER DEVICE QA0011 from ifm electronic offers a clear on- and offline- parameterization of IO-Link sensors via USB adapter E30390. The configuration software offers reading of IODDs via storage media and automatic identification of the sensors. The graphical representation of the process values and the history memory incl. export function makes commissioning of IO-Link sensors very easy.

Specifications	Details
Weight	139.6g
Functions	parameter setting of IO-Link devices and ifm IO-Link masters; graphic representation of process values for device set-up and diagnosis; IODD management
Application	online and offline parameter setting of IO-Link devices
