

TVM SERIES Non-contact measurement system | 200 mm x 100 mm CNC measuring stage

When quick throughput and user-friendliness are crucial, the TVM digital measuring microscope is an excellent option for a shop floor non-contact measurement system for 2D measurements of both turned and flat components. The motorized stage can measure larger components quickly and automatically.

For precise measurement and inspection, the telecentric optics and illumination produce a sharp, flat image throughout the entire field of view, enabling superior video edge detection capability.
