

Kennedy-Pro KEN5755040K | Single End | Non-Sparking Open Ended Spanner | 14mm, Metric

To reduce the possibility of unintentional fires or explosions in potentially flammable or explosive situations, spark-resistant instruments are utilized. They fend off sparks that a regular tool might produce when it hits hard surfaces. Many industrial applications, including the processing of chemicals and petroleum products, spray booth operations, the marine industry, the mining industry, the paper industry, and any other area with flammable vapours or combustible residues, need the usage of spark-resistant instruments. Spark-resistant safety tools made of aluminum and bronze have a breaking strain of 75–85 kgf/mm² and are produced to 25 HRC.

Tools that are resistant to sparks need particular maintenance. It is crucial to clean or redress frequently to get rid of impurities or ferrous particles that could weaken the spark-resistant qualities.

Specifications	Details
End Type	Open
Material	Aluminium Bronze
Length	125mm
Spanner Size	14mm
Type	Non-Sparking Open Ended Spanner
